

EXPERIENCE THE ULTIMATE IN MUSICALITY

Thank you for purchasing Danacable™. This extraordinary product will make your audio system perform at its best potential. Cables, being conductors, can impede the free flow of audio signals if their design, material, or construction techniques result in high Resistance (R), Capacitance (C), or Inductance (L). The DanaCable patent-pending design, material, and unique construction result in very low R, C, and L measurements as compared to other cables. But the proof is in the listening . . .

DanaCable Power Force for high-current components

The shortest distance between two points is a straight line. That is our design philosophy for our power cords . Huge, high-grade industrial power cable carrying the load is at the heart of every DanaCable power cord. Put this brute to work for your highest current devices. Get the most out of amplifiers, line conditioners, and all other high power devices.

Danacable Source Clarifier for source components

Maintain the signal integrity that your music source was designed to deliver. Your CD transport, DAC, Music Server and your preamp need an ultra-clean power source. If noise and radiation get in the signal chain at the beginning, it is there to stay. The special construction of our Source Clarifier AC power cord turns every inch of its length into a filter, removing line noise and keeping radiation from getting in

Break-In period

DanaCable requires about 50 hours of break-in to begin to perform as designed. You will find the cables begin to “sing” when they have been broken in for about 100 hours.

Should you ever misplace this manual, it is also on our website
